Visualizing and Communicating Environmental Issues

Paul Ehrlich and John Holdren proposed that a powerful tool for understanding environmental issues is through a very simple equation,

\[ \text{Human Impact} = \text{Population} \times \text{Affluence} \times \text{Technology} \quad (I = P \times A \times T) \]

How can the perspectives of the arts, communications and media, the social sciences and others regarding these factors inform biology and biologists in identifying problems and reaching solutions?

Presentations and workshops addressing other topics are welcome. Below are some examples of potential presentations:

- Curricula – Environmental Studies/Environmental Sciences – content/method/delivery
- Sampling and Reconstructing Environments: What the past and the present tell us
- Imaging/Digital Video/GIS as Forms of Communication
- Environmental Ethics
- Teaching Identification/Taxonomy: why/how
- Interdisciplinary Problem Solving

Many of you have addressed these issues in creative ways. Please consider sharing your ideas and techniques at the ACUBE 46th Annual Meeting at Columbia College in Chicago in 2002.

Please email your abstract AND mail a hard copy of the abstract with the completed form BEFORE June 1, 2002 to:
